

FIRST LAUNCH

Diesel propulsion system commissioning service

Welcome to Volvo Penta, the leader in marine propulsion innovation

As a new Volvo Penta-powered boat owner, you are entitled to a free* First Launch orientation conducted by a certified Volvo Penta dealer.

During the orientation, you or your designated captain will receive extensive hands-on training. The on-board education will focus on understanding the Electronic Vessel Control (EVC) functions, regular engine room check requirements and routine maintenance. This is an ideal opportunity to become familiar with the propulsion system and engage in dialogue with a trusted Volvo Penta servicing dealer.

Upon completion of the service, the technician will upload the sea trial and performance data to the Volvo Penta Product Center, initiating the base engine warranty. Volvo Penta recommends the First Launch orientation take place within the first 90 days from delivery of the new boat.

It's important to us that as a new Volvo Penta owner, you have a thorough understanding of how to properly operate and maintain your propulsion system from the very beginning. That's why we make available a certified Volvo Penta technician, who will be by your side at the first launch and the start of your new adventure.

* While the First Launch service is free, dealer travel time is not covered.

First Launch service available for diesel products in:

- North America
- Central America
- Caribbean
- South America

Find your local dealer on the Volvo Penta **Dealer Locator** at volvopenta.us or download the app for iOS and Android platforms.
